# An Entirely New Class of Light Beams in the EUV: Self-Torqued Harmonics with Ultrafast OAM

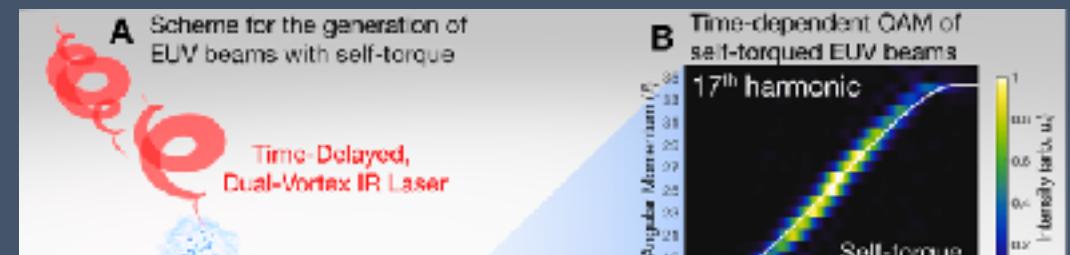

- Prediction and description of a new property of light, self-torque, associated with a time-variation of OAM.
- Self-torque endows unique properties to coherent light forms (time-varying OAM, azimuthal frequency chirp).
- Self-torqued light beams synthesized via HHG, so far the only method for producing self-torqued light.
- Unique light source for controlling quantum and topological matter, OAM dichroism, and resolving ultrafast charge and spin transport.
- Self-torqued beams can yield exotic EUV supercontinua with attosecond variation of the OAM.

# An Entirely New Class of Light Beams in the EUV: Self-Torqued Harmonics with Ultrafast OAM

- Prediction and description of a new property of light, self-torque, associated with a time-variation of OAM.
- Self-torque endows unique properties to coherent light forms (time-varying OAM azimuthal frequency)
